

March Networks Implements TestTrack Pro to Assure Product Quality

For close to a decade, March Networks has helped some of the world's largest commercial and government organizations transition from traditional CCTV to networked video surveillance used for advanced security, loss prevention, and risk mitigation. March Networks' systems are delivered through an extensive distribution and partner network, and currently support over one million channels of video in more than 50 countries.

Highlights

Industry

Security

Challenge

Improve the management of test cases, defects, and software changes.

Solution

TestTrack

Benefits

- Comprehensive change management
- Improved defect tracking
- Easy integration with existing software
- Higher product quality

With hundreds of customers depending on the company for security, March Networks needed to implement an issue management solution to aid in developing high-quality, enterprise-level products. That's why they chose Seapine Software.

March Networks implemented TestTrack Pro at its Ottawa, Canada and Milan, Italy development offices to track and manage potential defects, feature requests, change requests, and other work items in the development process. TestTrack Pro easily integrated with previously-installed Seapine ALM tools, helping the organization manage the development of quality software across both locations. Both offices also use TestTrack TCM to manage test cases, and the Milan office uses Surround SCM for software configuration management.

"We are very pleased with Seapine's TestTrack TCM product and the company's support services. . . Seapine has a great product line with first-class features."

Andrew Collins

Product Validation Manager, March Networks

"We are very pleased with Seapine's TestTrack TCM product and the company's support services, and anxious to implement the other Seapine ALM tools to take full advantage of the integrated capabilities," said Andrew Collins, Product Validation Manager, March Networks. "This will enable us to better track and manage test cases, defects, and software changes in a comprehensive fashion. We've also recently evaluated TestTrack RM for managing project requirements and readily see the advantages of upstream and downstream traceability of artifacts. Seapine has a great product line with first-class features."
